

AUTOMATIC DIVIDER/ROUNDER Athena

The Athena divider rounder with its five rows divides and rounds dough pieces with a speed production of 10,000pcs/hr with variable weight ranges from 30 to 125 grs.

The machine is equipped with an in-feed hopper for approximately 16Kg of dough. The dough gently handled thanks to a dosing star system, is compressed in the portion chambers, which appropriately adjusted gives the required weight, with a less stress of the dough and therefore a better product.

The machine is supplied with a rounding chamber, Once the weight is fixed the dough piece is discharged and enters the rounding station. The rounding happens in two phases and it is possible to adjust the speed in order to meet every operating need.
